The critical factor in the creation of an ergonomic environment

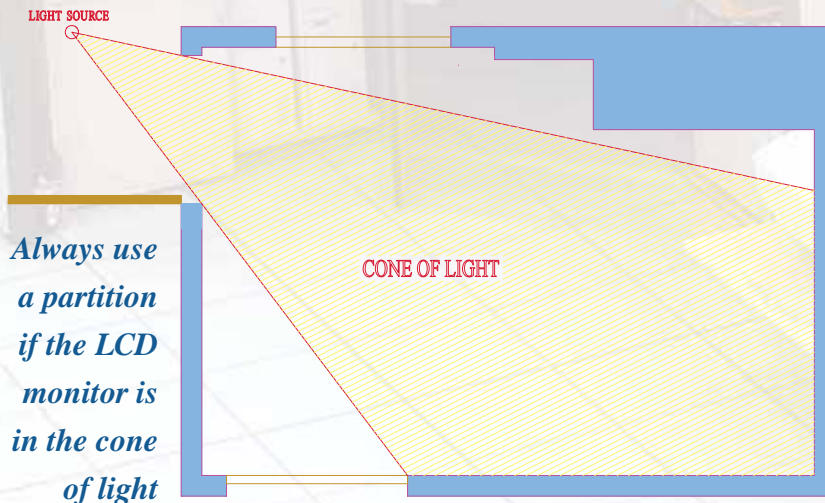

How you position the workstations and create the environment is of utmost importance.

- Creating a comfortable environment is of utmost importance
- Creating an ergonomic environment based on scientific evidence

We are providing a solution that will interface with the deployment of your PACS system.

- This is a process that will take you through a series of questions and answers about how you work
- Critical factors you need to consider:

- Cone of light
- Height of workstations
- What items you are considering to place on the workstation place everything at your fingertips (phone, dictation machine, laptop computer...)

Key to successful implementation of ergo reading room

Computer vision problems

- Eyestrain
- Eye fatigue
- Eye's burning
- Redness
- Blurred vision
- Dry eyes

Lighting

- Incandescent lighting is described as the traditional light bulb
- Ambient lighting, described as light that bounces off the ceiling – not directly to the computer screen
- No glare

Engineering & Ergonomic Audit

- Electronic height adjustment of the work surface, the monitor height to be quick and silent
- Ability to read/work, type while standing up
- Work surface height is matched to comfortable armrest height
- Monitor height is adjusted to user comfort and independent of the table surface. This variable is accomplished by our electronically height adjustable table independent of the electronically height adjustable monitor.
- Footrest is critical to the relief of low back stress
- Monitor-eye distance should be adjustable
